

e.telligent

SIMPLY MANAGING ENERGY.

e.CoSys Test management

**VERSATILE.  
HIGH PERFORMANCE.  
INTUITIVE.**

Efficient test management – from requirements specification, test planning and test execution to verification and reporting, with all steps seamlessly integrated and synchronized

## E.CO SYS TEST MANAGEMENT

# SMART TESTING – COMPREHENSIVE & STRUCTURED

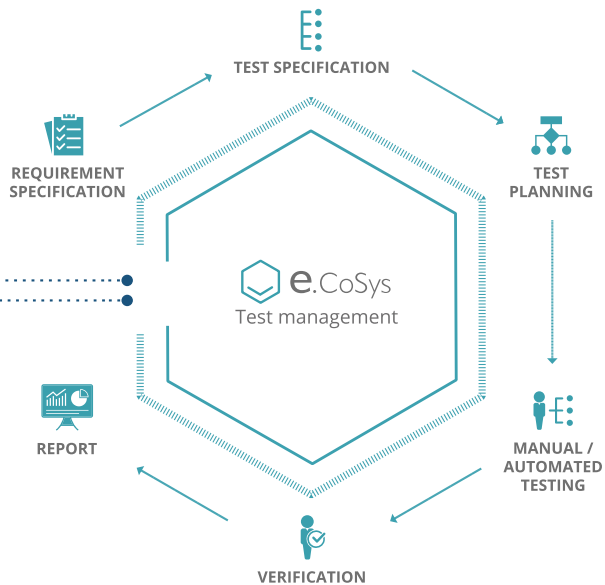

Through years of involvement in complex product development, the e.CoSys Business Application (e.CoSys BA) team has gained extensive experience in the field of testing. This hands-on experience sparked a clear vision: to simplify and streamline the entire testing and planning process through a intuitive technical solution.

The result? Powerful tools like a requirement management system and a test management system – developed with one guiding principle in mind: by test managers, for test managers.

### YOU WANT

- A test management system for validation and verification of product requirements
- Adaptation to individual processes and test objects
- Import of requirements, test specifications, links e.g. ReqIF
- Intuitive usability and clarity
- Possibility of cross-company collaboration
- Integration of external systems

### WE OFFER

## KEY FEATURES

- **EXPANSION OPTION**  
Combine it with other ALM-system components.
- **SEAMLESS INTEGRATION**  
Keep all systems synchronized with a high-performance API.
- **CONFIGURATION**  
Easily customize the system to your testing needs.
- **CROSS-COMPANY TEAMWORK**  
Collaborate effortlessly to achieve your goals together.
- **CONTINUOUS DEVELOPMENT**  
Benefit from constant further enhancement.

## SPECIFICATIONS

Define tests using custom fields and link them to requirements as needed. If tests are already defined, simply import them – for example, via ReqIF files. You can also integrate an internal or external requirements management system.

## TEST PLANNING

Organize all tests relevant to a release in a test plan. A status bar provides real-time insights into execution progress, while applied test versions are systematically tracked – ensuring full traceability throughout.

## HOW IT WORKS

## REPORTING

Create a report of your test plan on the actual status. And as templates are used, reports can be adapted to your needs at any time.

## TEST EXECUTION

Execute tests manually – using overall test evaluations, aggregated step-by-step assessments, or rule-based logic. Also test automation tools such as EXAM can be integrated.

## ACHIEVE A REALTIME OVERVIEW OF THE VALIDATION PROCESS BY A TAILORED TESTING TOOL
